Subject: RE: Question about test data from GM confirmatory tests

Hi, David:

The tests for this vehicle had being rejected from Verify a couple of times now. Ken Clark and the Help Desk of Verify are currently working to find out the issue for the rejection.

Yours, Arlene

Subject: FW: Question about test data from GM confirmatory tests

Arlene,

CD (David Wright) is awaiting the results for Equinox EDV, 15NjX74405 to be uploaded into Verify. They have a hardcopy of the results. Could you check on this? It was tested on D006. Thanks.

Dan

Subject: Question about test data from GM confirmatory tests

Dan,

I believe two GM vehicles have had official confirmatory tests performed in the hot test cell, vehicle 161HPV4323 (diesel Cruze FEDV) and vehicle 15NjX74405 (gasoline Equinox EDV). The diesel Cruze I believe was the vehicle which had the void and variant due to the CO2 analyzer drift issue. The official results are in Verify, however, we have not

seen/received the hard copy reports and GM is requesting copies (which is a typical practice). So, I am wondering if you have the official test results and if so can we get copies to forward to GM?

The gasoline Equinox EDV, 15NIX74405, we have the hard copy data, however, the results have not been uploaded into Verify. As our test results become the official results for GM, they need the Verify data to complete their application for a certificate. I am wondering if you know when the results from these tests will be entered into Verify?

Thanks,

David
